Cubotino autonomous, connections board:

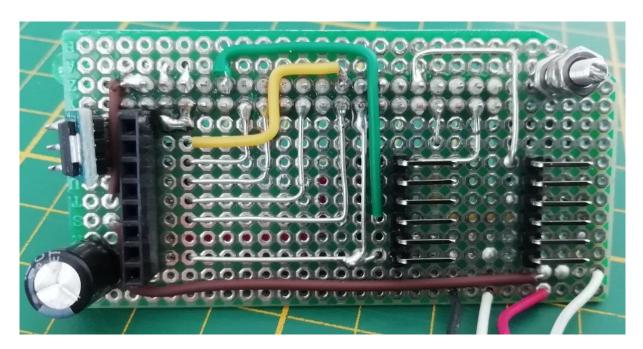

Front view (the 2x20 header is on the opposite side):

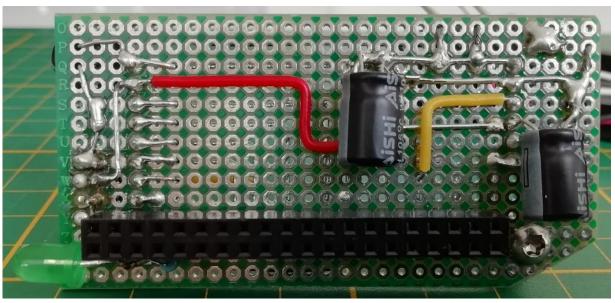

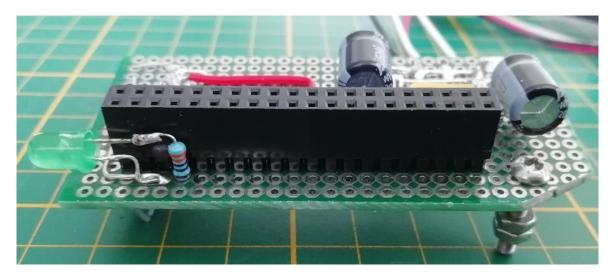

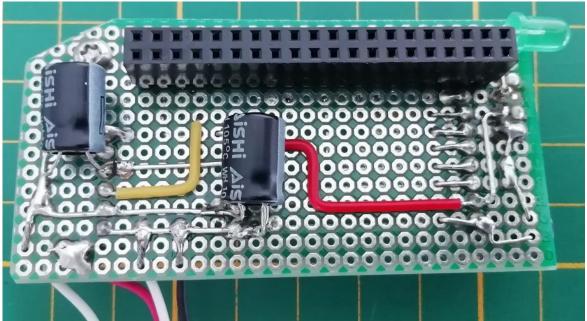

Notes:

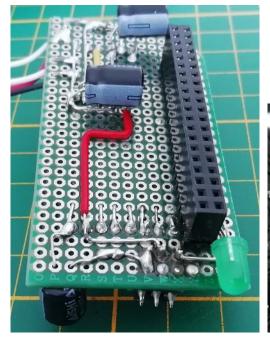

- 1. The prototype board should be of a double face type.
- 2. Start by positioning the 2x20 header, at 3rd hole from the corner.
- 3. Count the holes for the other parts positioning.
- 4. Dashed lines for parts/wires on the opposite side.
- 5. Blue lines are wires without insulation.
- 6. Red, Brown, Orange and Green lines are insulated wires.
- 7. Use insulated wires when crossing other lines, also when these are on the board opposite side.
- 8. Filled dots are connections.
- 9. 15mm is the max height for the 3V3 step down board, and the capacitor close to the display connector.
- 10. Ø2,5mm hole is for a M2,5mm bolt (and 3 nuts) to support the display. The highest nut should be at ~15.5mm from the board surface.
- 11. Add the last 2 capacitors, close to the servo connectors, once the board has been tested.

microUSB breakout board: Wire soldering orientation
